HBM / SYSMEX · S/4HANA · WRICEF · WORK STREAM PTP · PACKAGE ZPTP_SPLIT_VAL

Stocks & Batches Migration Program

Split Valuation, Phase 1. Moves unrestricted stock and batches from the existing plant to the new split-valuated plant, with full validation, simulation, restart and an audit log.

SOURCE	301	TARGET · SPLIT VAL.
8P01	→ BAPI_GOODSMVT_CREATE	8Q01

1 Overall purpose

Plant 8Q01 is created with split valuation active. The existing unrestricted stock of 8P01 has to land there with the right valuation type on every material and batch, without double issues, orphan batches or untraceable postings.

The WRICEFs cover the whole chain:

- build the HBM Valuation Type Input File from SAP stock;
- extend the batches to 8Q01 with the source attributes and the target valuation type;
- post one 301 document per file line, one item per issuing storage location, received in the mapped storage location of 8Q01;
- reconcile file against SAP stock, then log every line and every batch for audit, reprocessing and sign-off.

Movement	301 · one-step plant-to-plant · GM code 04
Stock scope	Unrestricted only (MCHB-CLABS / MARD-LABST)
Out of scope	QI, blocked, special stock · batch classification
Materials	Batch-managed and non-batch (NO_BATCH)
Option 1	Split valuation materials, file-driven
Option 2	Non split materials not in the file, whole stock
Modes	Full validation · Direct transfer · Simulation (TESTRUN) · Restart by RUN_ID
Messages	Class ZPTP_SPLIT_VAL (002–026)

2 ABAP programs developed

PREPARE THE FILE

ZPTP_SPLIT_VAL_MIG_UTILITY

Input file generator

Reads unrestricted stock of 8P01 per material and batch, picks the valuation type of 8Q01

STAGE THE FILE

ZPTP_SPLIT_VAL_MIG_UPLOAD

PC → application server

Copies the input file byte for byte from the PC to the application server, so the migration can

(first in ascending order) and downloads the CSV `MATNR;CHARG;BWTAR;QUANTITY;UOM`. ALV shows every line kept or left out, with the reason.

Test mode ALV only

run as a background job. Dialog only; asks before overwriting.

Binary copy Dialog

BATCH MASTER (OPTIONAL)

ZPTP_SPLIT_VAL_BATCH_COPY

Batch copy 8P01 → 8Q01

Reads an Excel file (material; batch; valuation type) and creates the batches at plant level in 8Q01 with the source attributes and the file's valuation type. No stock movement.

Test mode ALV, no DB log

MIGRATE

ZPTP_SPLIT_VAL_MIG

Stock & batch migration engine

Validates the file against SAP (valuation segment, quantities, units, NO_BATCH, storage-location mapping), creates missing target batches, allocates per storage location and posts the 301 movements. Logs every record.

Simulation RUN_ID restart Logged

3 Custom transactions

None developed. All four reports are started from SE38 / SA38, or scheduled as a background job (SM36) for the migration run.

CODE	USE
ZPTP_SPLIT_VAL_MIG	Name reserved by the naming standard if a transaction is requested; not created
SM30	Maintain ZPTP_SLOC_MAP
SE16	Read the log tables by RUN_ID
CG3Z	Standard alternative to the UPLOAD report (text mode)

A report-level authorization check (S_TCODE or a custom object) is still open with the security team.

4 Customizing before the run
